<u>Range Management</u>				
Source Document	Type	Description	Yes/No	Comments
GIS_ArcMap	Range Improvements		No	<p>No RIPs (Range Improvement Projects) were found to be located within the parcels identified. The 100K layer map did show windmills within 2 of the sections, a site visit will determine if accurate or not. No other Range issues exist with Geothermal Lease Sale proposal.</p> <p>UPDATE May 5th – A site visit was conducted and the wells that were determined to be shown on the 100k layer maps are more historic in nature and do not provide livestock with water (Non Functioning). The range user in the area does have access to water on private property in the area of the proposed sale.</p>
